Prepared by: Justin Sindelar, Nutrient Advisors

Dear Mr. Schnoor:

Representatives of the Nebraska Department of Environment and Energy (Department) have reviewed the request for the proposed design change, received on November 6, 2023, describing the change of critical levels in the holding pond at the above-referenced concentrated animal feeding operation.

The Department **APPROVES** the request for the proposed design change to the Construction and Operating Permit issued on July 9, 2012. The design change request is for the following:

1. Updating the runoff calculations and adjusting the critical levels in the holding pond.

Only the design change noted above is being approved at this time.

In this instance, the Department has determined that the proposed change is not a major modification. The Department's decision was based upon an evaluation of construction requirements, site considerations, any required approvals from the Nebraska Department of Natural Resources, and other related concerns or requirements. All other design elements contained in the previously issued permit remain the same. Thank you for your cooperation. If there are any questions, please contact me at (402) 471-4255.

Sincerely,

*Logan Hauder*
